Technical Skills

Security & DevSecOps

- SonarQube
- DevSecOps
- SAST
- DAST
- OWASP Top 10
- Kiuwan
- Keycloak
- OAuth2
- JWT

AI & Machine Learning

- Machine Learning
- OpenAI API
- LLMs
- RAG
- Roboflow
- Computer Vision
- NLP
- AWS Bedrock
- Azure AI Foundry

Programming Languages

- JavaScript
- TypeScript
- C#
- Python
- Kotlin

Backend

- Java
- Spring Boot
- Node.js
- NestJS
- .NET
- WebFlux
- RxJava
- Flask
- Django

Frontend

- Next.js
- React
- Angular
- Ionic
- Tailwind CSS
- Sass

Cloud

- Azure
- AWS
- GCP
- SQS

DevOps

- Docker
- Kubernetes
- Jenkins
- Terraform
- GitHub
- New Relic

Databases

- MySQL
- PostgreSQL
- MongoDB
- Redis

Testing

- JUnit
- Mockito
- Jest
- Selenium
- Postman
- Karate
- Playwright

Career Profile

Sr Fullstack Developer with 6 years of experience, the last 3 years working remotely for US companies with technologies such as Next.js, NestJS, Java Spring Boot, Azure and DevOps. I have experience working in startups for different companies in sectors such as Retail, Fintech and SaaS Providers. I specialize in developing complex solutions, mainly for telemetries in the financial, retail automation, CI/CD and quality testing. I work hands-on across DevSecOps and application security: static and dynamic analysis embedded in CI/CD pipelines, OWASP Top 10 remediation, identity and access management with Keycloak, and automated security testing with Playwright covering authenticated flows, authorization and security configuration. Committed to continuous improvement and building efficient and scalable software.

Professional Experience

AI Tech Lead Entel

2025-11 - Present
Hybrid

Entel is one of the largest telecommunications companies in Chile and Peru. As AI Tech Lead of SinfonIA, I lead the development of an AI-powered platform for transcribing hundreds of thousands of daily audio calls using Whisper X, silence detection, and generating insights to help agents improve performance and reduce operational costs by 75%.

- Leading the AI team as Tech Lead for SinfonIA, a voice-to-text transcription platform processing hundreds of thousands of audio files daily
- Implemented Whisper X for high-accuracy speech-to-text transcription with silence detection capabilities
- Developed AI-driven insights engine to analyze agent performance and provide actionable recommendations
- Achieved 75% cost reduction compared to previous vendor solution through in-house AI implementation
- Architected scalable serverless infrastructure using AWS Lambda and SQS for processing and queuing massive audio workloads
- Built automated security testing with Playwright covering authenticated flows, session handling and role-based authorization across the platform, running on every CI build
- Applied DevSecOps practices to the AI pipeline: static analysis gates before release and hardening of the services handling sensitive call audio

309

Technical Lead 309 Technology - USA

2025-04 - 2025-11
Hybrid

309 Technology is a startup company based in the USA focused on innovative technology solutions and AI-driven applications.

- Leading the entire development team using agile methodologies such as Scrumban and Jira for project management
- Architecting and developing applications using Next.js, AI integration, Java, and Kotlin with Spring Boot
- Managing cloud infrastructure on AWS and implementing machine learning solutions

Sr Software Engineer

Encora (Clients: Interbank, Niubiz, Scotiabank)

- Peru

2023-10 - 2025-04

Remote

Encora is a global technology company that provides innovative software engineering solutions to leading enterprises across various industries.

- As part of the team, I developed backend applications using Java Spring Boot, implementing reactive programming with WebFlux and RxJava, and ensuring high-performance financial services. I conducted unit testing with JUnit and Mockito, deployed services on Azure and AWS, and monitored applications with New Relic.
- Additionally, I contributed to frontend development with Angular and Next.js and applied DevOps practices using SonarQube, Kiuwan, and CheckStyle. At Scotiabank, I worked with Java 8 and Eclipse, focusing on secure and efficient financial solutions.
- Ran static application security testing (SonarQube, Kiuwan) as a release gate on banking services, triaging findings and remediating vulnerabilities before deployment
- Implemented authentication and authorization with Keycloak (OAuth2 / OIDC, JWT), including token lifecycle and role-based access control across financial APIs

Sr Software Engineer

Serverli - Florida USA

2024-06 - 2024-12

Remote

Serverli is a platform for managing and monitoring physical and IoT security systems, integrating video, access control and devices in real time. As a Senior Software Engineer, I led frontend development with Next.js and backend with Nest.js, managing environments in Azure, improving architectures and specializing in IoT security applications.

- Led frontend development with Next.js and backend development with Nest.js, focusing on IoT security applications
- Managed environments in Azure, improving system architectures and optimizing deployment processes
- Specialized in developing IoT security solutions integrating video surveillance, access control, and real-time device monitoring
- Hardened the platform through internal security testing: probed access control between roles, reviewed code for OWASP Top 10 issues and remediated the findings
- Automated validation of security configuration (security headers, CSP, cookie flags, HTTPS) and turned every fixed vulnerability into a Playwright regression test

Software Engineer

MDP Consulting

2020-11 - 2023-10

Hybrid

MDP Consulting is a recognized leader in IT services, offering innovative solutions for clients in Latin America. During my time at the company, I progressed through multiple roles including Backend Technical Leader, AI Developer, Cloud Administrator & DevOps, Scrum Master & Mentor, and Senior Developer, working on diverse projects spanning backend development, AI integration, cloud infrastructure, and team leadership.

- Backend Technical Leader: Led Pacific Client project using Java Spring Boot with Java 11/17, implementing functional and reactive programming patterns
- AI Developer: Developed AI solutions for Reseñan Colombia Client using OpenAI APIs and machine learning technologies
- Cloud Administrator & DevOps: Managed infrastructure automation and deployment pipelines across AWS, Azure, and GCP platforms
- Scrum Master & Mentor: Led MDP bootcamp program, providing technical training and mentoring to junior developers
- Tech Lead: Managed full-stack development projects with Memorandum, a Greek technology company, overseeing both backend and frontend development
- Senior Developer: Delivered high-quality backend solutions with Java Spring Boot and Node.js, and frontend applications with Angular, Ionic, and React
- DevSecOps: Embedded static analysis and security scanning into the CI/CD pipelines I administered across AWS, Azure and GCP, blocking releases on unresolved findings

Recent Personal Projects

Monyx - Personal Finance

App with AI

Developed a comprehensive personal finance application powered by AI that helps users categorize expenses, capture receipts through photo recognition, and receive intelligent financial recommendations for better money management.

- Implemented AI-powered expense categorization using machine learning algorithms
- Built OCR and computer vision system for automatic receipt scanning and data extraction
- Created intelligent financial advisor with personalized recommendations
- Developed real-time expense tracking and budget management features

Calarm - Smart Alarms

from Your Calendar

Native iPhone app published on the App Store that turns calendar events into alarms: in two taps you pick the event and how many minutes before it you want to wake up. Built with Swift and SwiftUI.

- Reduced setting a wake-up alarm to two taps: choose the calendar event and how many minutes before it should ring
- Removed the mental math the task normally requires every night — what time the meeting is, how long to get ready, how long to get there
- Integrated calendar access with EventKit, handling Apple's permission model and privacy requirements for reading user calendars
- Built natively in Swift and SwiftUI, shipped and maintained on the App Store

Live Demo

- Achieved 95% accuracy in expense categorization and receipt recognition

[↗ Live Demo](#)

<> I Selvatici - Cooking Workshops & Personal Chef

 Next.js  React  i18n  SEO  Vercel  Responsive Design

Bilingual site for a Basilicata project offering cooking, garden-therapy and sewing workshops in Castelgrande, plus a personal chef service across Italy. Built with Next.js on Vercel, with bookings handled over WhatsApp.

- Built a bilingual site (Italian and English) with per-locale routing and metadata
- Statically prerendered pages for fast loads and indexable content
- Used WhatsApp as the booking channel, avoiding a backend and reservation system entirely
- Structured content around workshops, upcoming dates and local products

[↗ Live Demo](#)

<> Asociación Fa Meng Chuen - Martial Arts School

 Next.js  React  SEO  Vercel  Responsive Design

Site for a Chinese martial arts school in Miraflores, Lima, presenting its Tai Chi, Sanda and Taolu programs and turning visits into first-class bookings over WhatsApp. Built with Next.js on Vercel.

- Presented the school's disciplines and programs (Tai Chi, Sanda, Taolu) as the core of the page
- Drove first-class sign-ups through WhatsApp instead of a form plus backend
- Set up localized metadata and Open Graph tags for es-PE on a custom domain
- Responsive layout aimed at the mobile traffic the school gets from social media
